

ENTREX TECHNOLOGY BACKGROUND:

Entrex is a proven, blockchain-enabled, regulator reviewed, alternative trading marketplace for investors to find, research, track, manage, and trade alternative securities.

Collectively our platforms:

Originate: Alternative Securities

Structure: Offerings

Offer: Fractionalized securitizations

Place: Through regulated parties

Trade: Through platform portals.

Settle: Trades between parties

and

Service: Interest bearing securities

Our IBM technology platform provides robust, scalable, capabilities allowing diversified sectors access to an industry focused platform to buy and sell alternative securities between parties.

Working together with industry sector leaders our platforms offer individual or institutional investors access to a simple, robust and compliant platform which offers trading solutions for their alternative portfolio needs.

Today Entrex manages a regulatory compliant domesticated ledger to support all user's regulatory oversight needs.

Entrex can push offerings, trades and settlement out to the blockchain as securitization technology become standardized; supporting global immutable ledger transactions.

Our various platforms offer proven compliance and performance for financial institutions and investors interested in trading and managing alternative assets.

MUNI-LOAN PLATFORM HIGHLIGHTS:

Entrex's Interbank Municipal Loan trading platform offers regulated banking constituents access to an efficient, regulatory compliant, trading solution to find, research, track, manage and trade municipal loans.

Banking Institutions can now simply and discretely buy and sell municipal loans between regulated entities merely by managing their municipal loan portfolio on the Entrex Interbank Municipal Trading Platform.

Registered banks can manage and even securitize their municipal loan portfolio into desired increments allowing the sale of part or whole issuances of various originated municipal loans providing loan allocations pursuant to balance sheet needs.

All buy/sell trading activity of municipal loans are managed on a regulatory reviewed technology platform allowing control and monitoring for bank compliance entities.

Settlement occurs efficiently; providing parties audit trails of any trade on both the buy and sell side of a transaction.

Trade audit trails are available on-line providing interested parties convenient access to the time/date, value and settlement details of a trade.

Municipal loans can also be pushed out to other regulated parties to sell; potentially at a premium, to other institutional buyers.

As industry standardization occurs Entrex's eChain technology can distribute trade information to a global immutable ledger while managing portfolio's simplistically with Entrex Owner Portals.
